Ravindrakumar M. Suthar

Senior Principal Architect • Engineering Leader • AI Platform Lead

Location: Pune, Maharashtra, India | **Phone:** +91 83800 99988 | **Email:** ravindra.suthar@me.com
LinkedIn: linkedin.com/in/ravindrasuthar | **GitHub:** github.com/rmsuthar | **Portfolio:** ravindra.lets.gen.in

PROFESSIONAL SUMMARY

Engineering leader with **20+ years of total experience**, including **13+ years in enterprise BFSI platforms**, steering multi-team engineering organisations through large-scale digital transformation in regulated Banking, Financial Services, and Insurance (BFSI) environments. At Citicorp Services India, progressed through the engineering ladder from Technical Lead to **Senior Principal Architect & Engineering Leader**, building and retaining high-performance squads with sustained **under 8% attrition** — a benchmark exceptional in enterprise engineering.

Delivered measurable, executive-visible impact: **60% reduction in migration cycle times** via an autonomous AI agent & integrated VS Code extension; **50% application load-time improvement** through React / Next.js performance engineering; **40% cut in integration complexity** across distributed platforms; and **35% developer effort saved** through AI-augmented workflows (Devin AI, GitHub Copilot). Deep practitioner across micro-frontend architecture, enterprise accessibility (WCAG 2.1/2.2 AA/AAA, ADA, Section 508), and agentic AI developer toolchains.

TECHNICAL SKILLS & COMPETENCIES

Frontend Architecture: Micro-frontends, Module Federation, Reference Architecture, UI SDK Development, npm & Yarn Workspaces, System Design, UI Platforms, API and Iframe Integration, postMessage Protocols, Core Web Vitals, Bundle Optimization, Server-Side Rendering (SSR).

Core Technologies: React, Next.js, Angular (v10–v21), TypeScript, JavaScript (ES6+), Redux, Redux Toolkit, Zustand, Tailwind CSS, Vanilla CSS, SCSS, LESS, Vite, Webpack, Babel, Cypress, Jest, React Testing Library.

Delivery & Project Governance: Agile / Scrum / Kanban, Certified ScrumMaster (CSM), SDLC, Release Management, Change Management, Risk & Issue Management, Budget & Resource Planning, Financial Management, Executive Reporting & Governance, Vendor Management, GitHub Enterprise (GHE) Migration, Renovate Bot.

Enterprise Tools & PM Platforms: Jira, OpenShift DevOps, ServiceNow, Clarity, MS Project, GitHub Projects, Workday Platform Uploads, Workday HRIS, Adobe Experience Manager (AEM / CQ5), OpenText TeamSite, Salesforce Integration, Bitbucket, TeamCity, UrbanDeploy.

Leadership & Key Competencies: Cross-Functional Leadership, Strategic Thinking, Leadership and Influence, Stakeholder Management, Financial Management, Vendor Management, Communication and Presentation Skills, Decision Making, Conflict Resolution, Team Collaboration and Coaching, Talent Acquisition, Organization-Wide Innovation Programs.

Accessibility & Security: WCAG 2.1 & 2.2 (Level AA / AAA), Section 508, ADA Compliance, Focus Appearance (SC 2.4.13), Focus Not Obscured (SC 2.4.11), Target Size (SC 2.5.8), Kaltura Player Accessibility, axe-core, Lighthouse CI, NVDA Audits, Content Security Policy (CSP), Zero-Latency Dynamic Edge CSP (EdgeNonce), OWASP Top 10, DOM Runtime Integrity (StateGuard.js), Checkmarx, Vulnerability Remediation.

AI & Developer Productivity: RAG (Retrieval-Augmented Generation), Local Vector Store RAG, Non-AEM to AEM Migration AI Agent & Integrated VS Code Extension, Enterprise Gemini LLM Integration, Developer Productivity Tooling, Devin AI Autonomous Agents & Automated Pipelines, GitHub Copilot, Enterprise Prompt Engineering, AST Transformation Scripts, Google Antigravity SDK, LangChain, Automated Test Scaffolding.

Cloud & DevOps: Cloudflare Pages & Workers, GitHub Actions, GitHub Advanced Security, Dependabot, Docker, Kubernetes, OpenShift, Spring Boot 4.x.

PROFESSIONAL EXPERIENCE

Citicorp Services India Pvt. Ltd.

May 2013 – Present • 13+ yrs

Pune, Maharashtra, India

Full-time

- **Applications Development Sr Programmer Analyst** 2022 – Present
  - **Led enterprise CMS modernisation:** Orchestrated the full migration of Citi's OpenText TeamSite to Adobe Experience Manager (AEM), standardising content authoring workflows, component governance, and multi-brand publishing pipelines across institutional platforms.
  - **Architected Autonomous Non-AEM to AEM Migration AI Agent & Integrated VS Code Extension:** Engineered a unified developer productivity platform where an autonomous AI migration agent operates directly within a custom VS Code extension — combining **Retrieval-Augmented Generation (RAG)**, automated prompt engineering templates, and custom AST parsing scripts to migrate legacy non-AEM component trees into idiomatic **Adobe Experience Manager (AEM)** Core Components, HTL templates, and Sling models, slashing migration cycle times by over **60%** with automated validation.
  - **Championed and scaled enterprise-wide adoption of Devin AI and GitHub Copilot** across squads, saving **~35% developer effort** on boilerplate, test scaffolding, and migrations while boosting PR review velocity by **40%**.
  - **Led cross-functional frontend engineering squads (~12 engineers)** with sustained **under 8% attrition** through structured 1-on-1s, technical skill ladders, and internal Communities of Practice.
  - **Executive reporting & governance:** Translated multi-quarter engineering roadmaps into C-suite narratives; managed programme risk, release calendar, vendor relationships, and End-of-Vendor-Support (EOVS/EOL) transitions with zero business disruption.
  - **Enterprise GenAI Architecture & Local Vector RAG:** Architected enterprise Gemini LLM integrations with offline local vector store RAG for secure contextual retrieval within banking network boundaries. Engineered developer acceleration tools including an automated AEM layout analyzer (screenshot-to-component mapping), Adobe Experience Cloud release tracking across Launch, Analytics, and Target, and automated release validation workflows.
  - **Autonomous Code Remediation & AI Pipelines:** Orchestrated autonomous AI agents (Devin) with scheduled automation pipelines to detect End-of-Vendor-Support (EOVS) components, synthesize automated pull requests, apply framework upgrades, and manage tracking workflows autonomously across institutional banking and CMS applications post-migration.
  - **Strategic Platform Modernization & Angular Ecosystem Upgrade:** Directed enterprise frontend ecosystem modernization, upgrading Angular applications from 10.x to 21.x across cloud-native microservices; resolved complex Server-Side Rendering (SSR) routing challenges between cloud and legacy modules, modernizing enterprise intranet platforms.
  - **Enterprise Source Control Migration & CI/CD Governance:** Assumed technical ownership of enterprise migration to GitHub Enterprise, designing standardized repository structures, integrating automated dependency management (Renovate), and optimizing CI/CD delivery pipelines with zero downtime.

- **Enterprise Security & Accessibility Governance (WCAG 2.2 AA):** Governed platform accessibility standards across institutional client platforms, partnering with multimedia vendors to engineer bespoke player fixes for complex WCAG 2.2 AA compliance defects; systematically remediated application security vulnerabilities and static analysis findings across core microservices, including Spring Boot 3.x to 4.x upgrades.
- **Enterprise Salesforce Integration & Automation:** Architected secure Salesforce integrations with enterprise security header compliance for customer engagement channels; engineered automated validation suites verifying API health, container readiness, and cloud deployment statuses, substantially reducing release validation overhead.
- **Organization-Level Innovation & Technology Mentorship:** Actively contributed to organization-wide innovation programs and hackathons, evaluating and championing transformative engineering ideas and mentoring cross-functional teams across global business units.

Applications Development Manager 2018 – 2022

- **Led InView core framework development** and platform-wide performance improvements, managing a team of 6 engineers across multiple application module ownerships; delivered up to **50% load-time gains** via React, TypeScript, route-based code splitting, and automated Core Web Vitals telemetry.
- **Owned end-to-end project delivery** — from business kickoff and requirement analysis through technical architecture, budget estimation, timeline planning, and production release — collaborating directly with business stakeholders and global programme leads.
- **Engineered CI/CD delivery pipelines** using TeamCity and IBM UrbanDeploy, enabling zero-downtime releases and reducing manual deployment effort across concurrent module delivery streams.
- **Full-stack engineering contributions** including Java backend problem-solving to unblock critical frontend integration dependencies and accelerate feature delivery.
- **Governed change management, vendor management, and release management** processes across concurrent module delivery streams, ensuring regulatory compliance and zero production incidents.
- **Established enterprise-wide Section 508 and ADA compliance programme**, integrating axe-core and Lighthouse CI into pipelines alongside NVDA screen-reader audits, reducing post-deployment remediation spend by 60%.

Senior Engineer / Technical Lead — UI Architecture 2013 – 2018

- **Built and delivered Citi InView application modules** — a mission-critical institutional client platform — including the **Alerts & Notifications** module (real-time account activity triggers, threshold alerts for global institutional clients) and foundational InView UI Framework components adopted across downstream application modules.
- **Engineered the InView UI Framework**, establishing component standards, rendering performance patterns, and API/iframe integration protocols, cutting integration complexity by 40% and accelerating time-to-market for global trading and retail banking products.
- **Architected enterprise UI, API, and iframe integrations** across InView platform modules, establishing postMessage protocol governance and integration patterns adopted across 6+ product squads.
- **Built and mentored a team of 4–5 frontend engineers**, instituting code review culture, reusable component libraries, and cross-browser compatibility benchmarks.

Senior Consultant, CRM UI Architecture

December 2010 – February 2013

Cognizant Technology Solutions

Hyderabad, India

- Architected mobile CRM frontends with Siebel CRM targeting Google Chrome and enterprise tablets, boosting field-force productivity across distributed enterprise client accounts.
- Developed Oracle CRM API SOAP integrations, established client-side performance benchmarks, and led usability testing and heuristic evaluations.

Module Lead, UI Development & Usability Analyst

June 2007 – December 2010

Impetus Infotech India Pvt. Ltd.

Indore, MP, India

- Led UI engineering pods for enterprise web clients, translating concept visualizations into technical implementations and governing client-side architecture standards.
- Served as Usability Analyst, conducting end-to-end usability testing, competitive benchmarking, and heuristic/expert UX evaluations.
- Interacted with key organizational leads and stakeholders to steer collaborative technical discussions, architectural decisions, and delivery outcomes.
- Established frontend development and UI design standards, cross-browser compatibility benchmarks, and industry best practices.

Lead Web Specialist

August 2004 – June 2007

Gatesix Technologies India Pvt. Ltd.

Indore, MP, India

- Defined comprehensive strategies for UI/UX design, frontend development, SEO architecture, and W3C web standards compliance across corporate web platforms.
- Directed concept visualization, application user flows, and responsive UI design for websites and web-based applications.
- Spearheaded client-side R&D on emerging web technologies, benchmarking new frameworks and driving implementation standards.

Senior Web Designer

May 2003 – July 2004

Pinnacle Technosys

Vadodara, Gujarat, India

- Designed, developed, and maintained client portals and web-based marketing platforms with bespoke software integrations.
- Engineered W3C-compliant website designs and structured content implementations, ensuring cross-platform browser compatibility.
- Developed rich interactive web applications and digital media collateral, driving early adoption of standards-based browser technologies.

KEY ENTERPRISE & COMPANY PROJECTS

Autonomous Non-AEM to AEM Migration AI Agent & Integrated VS Code Extension

2024 – Present

Citicorp Services India Pvt. Ltd. • Enterprise CMS Modernization

Lead Architect • Generative AI & AST

Technologies: Generative AI, Retrieval-Augmented Generation (RAG), Abstract Syntax Tree (AST) Parsing, VS Code Extension API, Adobe Experience Manager (AEM Core Components, HTL, Sling Models), TypeScript.

- **Architecture & Integration:** Architected an enterprise developer productivity platform that pairs an autonomous migration AI agent with a custom Visual Studio Code IDE extension to automate legacy non-AEM component conversion to modern AEM Core Components and Sling Models.
- **Contextual RAG & AST Pipelines:** Standardized prompt engineering templates and injected repository AST hierarchies directly into developer workflows, programmatically generating production-ready HTL templates, Sling Models, and Touch UI dialogs with automated syntax validation.
- **Measurable Impact:** Slashed enterprise CMS replatforming timelines by over **60%**, eliminated context drift, reduced manual developer translation defects to near zero, and established reusable agentic engineering standards across squads.

Citi InView Digital Banking Platform Modernization & Micro-Frontends

2018 – 2022

Citicorp Services India Pvt. Ltd. • Institutional Wealth Management

Applications Development Manager • UI Architecture

Technologies: React, Next.js, TypeScript, Micro-Frontends (Module Federation), Webpack, Server-Side Rendering (SSR/SSG), TeamCity, IBM UrbanDeploy.

- **Zero-Downtime Micro-Frontend Architecture:** Modernized Citi's flagship institutional wealth management and digital banking platform (Citi InView) from monolithic legacy codebases into modular, independently deployable Micro-frontends.
- **Performance & Core Web Vitals:** Engineered route-based code-splitting, tree-shaking, server-side caching, and automated Core Web Vitals telemetry pipelines, delivering up to **50% load-time improvements**.
- **Resilience & Compliance:** Preserved 100% platform availability (zero downtime) throughout multi-year phased migrations, while reducing post-deployment accessibility remediation costs by **60%** via automated axe-core and Lighthouse CI pipelines.

Citi InView Real-Time Alerts, Notifications & UI Integration Framework

2013 – 2018

Citicorp Services India Pvt. Ltd. • Institutional Wealth Platform Senior Engineer / Technical Lead • UI Architecture

Technologies: JavaScript (ES6+), InView UI Framework, postMessage Protocol, Secure Iframe Governance, REST APIs, WebSockets.

- **Enterprise Alerts Engine:** Built and delivered mission-critical Citi InView platform modules, including the high-frequency Alerts & Notifications engine handling real-time account triggers, threshold alerts, and trade execution events for institutional clients worldwide.
- **Core UI Framework & Integration Standards:** Engineered the foundational InView UI Framework and standardized postMessage protocol governance for secure cross-domain iframe integration across 6+ product squads.
- **Measurable Impact:** Reduced cross-platform integration complexity by **40%**, accelerated feature release velocity, and established reusable component benchmarks across the engineering organization.

Enterprise CMS Modernization (OpenText TeamSite to AEM) & Cloud Intranet

2022 – Present

Citicorp Services India Pvt. Ltd. • Enterprise Content Management

Applications Development Sr Programmer Analyst

Technologies: Adobe Experience Manager (AEM 6.5 / Cloud Service), OpenText TeamSite, Angular (v10–v21), Spring Boot 4.x, Docker, OpenShift, GitHub Enterprise, Renovate.

- **CMS Replatforming:** Orchestrated the full migration of Citi's legacy OpenText TeamSite platforms to Adobe Experience Manager (AEM), standardizing multi-brand publishing pipelines, component governance, and authoring workflows.
- **Angular Modernization & SSR:** Upgraded enterprise intranet applications from Angular 10.x to 21.x across cloud-native microservices, resolving complex Server-Side Rendering (SSR) routing challenges between cloud and legacy modules.
- **Governance & Automation:** Led technical transition to GitHub Enterprise with automated Renovate dependency patching, remediated application security vulnerabilities, and upgraded core microservices to Spring Boot 4.x with zero downtime.

Mobile CRM UI Platform & Oracle CRM SOAP Integration

2010 – 2013

Cognizant Technology Solutions • Enterprise CRM Client Services — Senior Consultant • CRM UI Architecture

Technologies: HTML5, CSS3, JavaScript, Siebel CRM, Oracle CRM SOAP APIs, Google Chrome Optimization.

- **Mobile CRM Architecture:** Architected responsive mobile CRM web applications for enterprise tablets and Google Chrome, significantly boosting field-force productivity across distributed corporate accounts.
- **API Integration & Usability Auditing:** Developed Oracle CRM API SOAP integrations, established client-side performance benchmarks, and conducted rigorous heuristic UX evaluations and competitive usability testing.

Enterprise Web Client Architecture & Usability Engineering Suite

2007 – 2010

Impetus Infotech India Pvt. Ltd. • Enterprise Web Applications — Module Lead UI Developer & Usability Analyst

Technologies: JavaScript, DOM Scripting, Usability Testing, Heuristic Evaluation, Cross-Browser Compatibility.

- **Pod Leadership & Concept Implementation:** Led UI engineering pods translating concept visualizations into robust web client architectures, governing frontend coding benchmarks and W3C standards compliance.
- **Usability Analysis:** Directed structured usability studies, heuristic UX evaluations, and competitive analysis to streamline application navigation flows and maximize end-user efficiency.

FEATURED TECHNICAL INNOVATIONS & OPEN SYSTEMS

a11ysis (In-Page Live Accessibility Inspector & Triple-Engine Scanner): Continuous digital accessibility platform engineered to eliminate audit fragmentation and noise. Combines a concurrent triple-engine consensus architecture (IBM Equal Access 4.0, Deque Axe-core 4.10, and HTML_CodeSniffer 2.5) with an interactive, collision-free Shadow DOM HUD that mounts directly onto live web applications via script tag or bookmarklet. Provides on-hover element highlighting, real-time contrast inspection, and actionable code remediation snippets with zero data retention (100% client-side DOM evaluation) across WCAG 2.1/2.2 Levels A/AA/AAA, Section 508, and EN 301 549 (a11ysis.lets.gen.in).

FoodScan AI (AI Dietary Scanner & Label Decoder): Mobile AI application officially published on the Google Play Store engineered for conscious travelers (Vegetarian, Jain, Vegan, Celiac gluten-free, and severe allergen sufferers). Leverages dual barcode scanning and multilingual OCR to decode foreign food

labels (French, German, Japanese, etc.) and European E-numbers in under one second with deterministic dietary safeguards (Google Play • foodscan.lets.gen.in/packaging-marks).

EdgeNonce (Zero-Latency CSP Nonce Streaming Engine): Enterprise Content Security Policy engine at the network edge deployed on Cloudflare Workers. Utilizes streaming `HTMLRewriter` and V8 Isolates to inject dynamic 128-bit cryptographic nonces into cached HTML responses on the fly (under 1.5ms) without breaking origin CDN or AEM Dispatcher cache hits (100% cache retention). Built to enforce strict CSP Level 3 and satisfy PCI-DSS v4.0 (6.4.3 & 11.6.1), HIPAA, and GDPR compliance (edge-nonce.com).

StateGuard.js: Specialized browser runtime JavaScript utility that protects DOM attributes from tampering via browser developer tools. Engineered for client-side state integrity in mission-critical Banking, Financial Services, and Insurance (BFSI) transactional workflows (rmsuthar.github.io/StateGuard).

Global Edge Sandbox & Multi-Region Load Balancer Inspector: Edge proxy platform built on Cloudflare Workers simulating web access across 12 global PoPs with framebuster neutralization, biometric WebAuthn security, and WCAG AAA theme system (gateway.lets.gen.in).

CERTIFICATIONS & CREDENTIALS

- **Certified ScrumMaster (CSM)** — Scrum Alliance
- **AWS Cloud Practitioner** — Amazon Web Services
- **IBM Design Thinking Practitioner** — IBM
- **Google Analytics Certified** — Google

EDUCATION

Post Graduate Diploma in Information Technology 1999 – 2001
Sikkim Manipal University India

Higher Diploma in Software Engineering (HDSE) 1999 – 2001
Aptech Computer Education India

Bachelor of Science (B.Sc.) in Chemistry & Mathematics 1996 – 1999
Gujarat University India
